HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 26 February 2010 has been entered.

Response to Amendment

An "Amendment" was received on 17 March 2010, in response to Office Action of 01 October 2009. Claims 1, 9, 19 and 26 have been amended. Claims 37-42 have been cancelled. Claims 1, 2, 4, 6, 7, 9, 12-19, 21-24, 26 and 29-32 are now pending.

Response to Arguments

Applicant's arguments, see "remarks", pages 10-14, filed 17 March 2010, with respect to claims 1, 2, 4, 6, 7, 9, 12-19, 21-24, 26 and 29-32 have been fully considered and are persuasive. The rejection of 01 October 2009 has been withdrawn.

Allowable Subject Matter

Claims 1, 2, 4, 6, 7, 9, 12-19, 21-24, 26 and 29-32 are allowed.

The following is an examiner's statement of reasons for allowance:

In combination with the limitations of claims 1, 9, 19 and 26, prior art failed to teach a 3-D quadrupole trap and method for dissociating ions using the trap comprising

Art Unit: 2881

switching between two discrete DC voltage levels to form rectangular waveforms and to create a digital trapping field in the trap, wherein electrons are injected into the trap through a hole in a end-cap electrode (claims 1 and 19) or through a hole in a ring electrode (claims 9 and 26) while the trapping voltage is a selected one of the two discrete DC voltage levels to maintain the ion trapping conditions while the electrons are injected into the ion trap. Injected electrons reach the center of the trapping region with enough kinetic energy for electron induced dissociation to take place.

Zubarev (USPN 6,958,472) teaches a 3-D quadrupole trap, wherein figure 3 shows the electrons injected through a hole in the end-cap 22. Col. 10, lines 2-4 teach injecting electrons during a time when the voltage of the cap electrodes is decreased to 3V peak-to-peak.

As pointed out on page 11 of the remarks, "Zubarev decreases the peak-to-peak value of the trapping voltage in order to facilitate electron injection".

Zubarev decreases the peak to peak voltage to facilitate trapping such that electrons are injected at 3 volts peak to peak, wherein the claim requires "injecting electrons...while the trapping voltage is at a selected one of said two discrete DC voltage levels" (lines 5-6 of claims 1, 9, 19 and 26).

Zubarev fails to teach injecting electrons while the trapping voltage is at a selected one of said two discrete DC voltage levels to form rectangular waveforms. Zubarev additionally further fails to disclose dc voltage and switching.

Ding et al. (USPN 7,193,207) teaches a 3-D rotationally symmetric ion trap (fig. 1b) having a ring electrode 1 and cap electrodes 2 and 3. Figure 3a shows a digital

Art Unit: 2881

signal generator (11, 13 and 14) and switches 16 and 17 for providing alternating high and low voltage levels (abstract) to therefore provide a rectangular waveform to the electrodes.

Ding et al. differs from the claimed invention by not teaching injection of electrons and electron induced dissociation. As pointed out on page 12 of the remarks if Ding modifies Zubarev, "the modified invention would be an invention in which the peak-to-peak value of the rectangular waveform is decreased while injecting electrons".

Therefore Zubarev and Ding both fail to teach injecting electrons while the trapping voltage is at a selected one of said two discrete DC voltage levels to form rectangular waveforms.

Application of a digital trapping voltage, as described, enables the time window within which ECD can take place to be extended, and so gating of the electron beam becomes relatively straightforward. Therefore there is no longer any requirement to inject electrons through the electrode to which the trapping voltage is applied, in order to prevent high energy electrons from reaching the trapping centre and hitting the ion cloud (page 7, lines 11-17 of the present specification).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See references cited for a listing of the pertinent prior art found and the prior art found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
